Completed credits of 28 required

The goal of the Networking Certificate is to enable students who do not wish to complete a degree program to acquire the skills necessary to gain employment in the expanding field of building and maintaining computer networks. In addition, upon completion of certain courses, students are prepared to take industry standard certifications such as CompTIA's A+, Cisco Certified Networking Associate (CCNA), CCNA Voice, and CCNA Security examinations.

The program is designed to give students the information and communication technology (ICT) skills required to design, install, and manage networks. Students become competent in configuring switches and routers for both LAN and WAN implementations. Students also study network management, learn how to design and apply Access Control Lists and apply concepts relating to network security, maintenance, trouble shooting and upgrading of facilities. Basic IT essential concepts are learned, and students acquire a working knowledge of the Linux operating system.

CURRICULUM PREREQUISITE:

Students must complete **COMSC 101 Computer Programming I** (3) and **COMSC 118 Networking Fundamentals** (4) in order to take the first semester courses for this certificate. See the co-requisite and pre-requisite for these courses below. Speak to the curriculum chair for more information.
